

● CRYPTO, AI & FRONTIER TECH

The media network for **brands & creators.**

Blockster gives every project its own AI-run Station: publishing, subscribers, rewards, and growth campaigns in one place.

WHAT CHANGES

Stop buying articles. **Own the channel.**

Old model

You pay for isolated articles, posts, and promotions. The attention disappears, and the audience belongs to someone else.

Blockster V3

Your project runs a branded Station. Electra helps draft, publish, distribute, and report from web or Telegram.

Why it works

Readers earn BUX for reading, sharing, subscribing, and referring. Every story becomes a growth loop.

Same content budget — now it builds an owned audience and first-party data.

WHY THIS MATTERS

Attention is rented. **Audience** is owned.

Crypto and frontier-tech brands spend on agencies, PR, KOLs, and campaigns — but rarely keep the audience or the data. Blockster turns that spend into a media asset: a Station that publishes, rewards, grows subscribers, and compounds over time.

INSIDE A STATION

A full media operation — **in one place.**

Electra AI

Drafts, publishes, distributes & reports — you approve from chat.

Publishing

Stories, updates, video embeds, events, interviews and announcements.

Events

X Spaces, YouTube webinars, livestreams, AMAs, launches and IRL meetups.

Rewards

Readers earn BUX for reading, sharing, subscribing and referrals.

Raffles

Fund prizes your audience can win by burning earned BUX.

Analytics

Reads, shares, subscribers, referrals, events, rewards, campaign results and first-party audience data.

AMPLIFY WHEN READY

Rewards, referrals, reads and shares **generate growth.**

AI growth

Electra suggests content, campaigns, subscriber actions, reward ideas, and daily next steps.

PR + reach

PR wire, paid traffic, email, SMS, Telegram and launch amplification when you need more reach.

Event tracking

RSVPs, clicks, shares and invites are tracked; attendance is verified through APIs, QR, codes or uploads.

Incentivized reads, shares, and user referrals turn every story into an audience-growth loop.

SIMPLE TECH STACK

AI on the front end. **Onchain rewards** underneath.

Web + Telegram

Teams publish and approve from the Station dashboard or Telegram with Electra.

X + YouTube APIs

We connect to social/video APIs for event and campaign tracking where available.

BUX rewards

BUX is an in-platform reward point, not a tradable token. Wallet funding uses low-fee crypto rails.

FOUNDING 20 STATIONS

Launch free during beta. Fund your audience.

FOUNDING STATION PLACEMENT

Every dollar in the rewards wallet goes to your audience, not Blockster.
Readers earn BUX for engagement and burn it to enter your funded raffles.

BETA APPLICATIONS ARE OPEN

HOW TO START

Apply for a founding Station. **We launch V3 soon.**
